Mission Statement

To have the ultimate client experience ever.

Rough Roads

Our city roads are extremely rough which has caused your vehicle to take a beating. In life your road can be rough as well. Personally it was a rough road this winter. I had a fight with kidney stones and had to be operated on, as it became a semi-emergency. I still have more stones that have to be dealt with.

Also this winter my oldest brother lost his battle with pancreatic cancer and he was only 69. I'm not telling you this for sympathy but to encourage you to spend as much time with your family and friends as you never know what the future holds.

Back to our Winnipeg roads—they put your vehicles' suspension through an extreme workout every time you drive your car. Your shocks, struts, and front end parts are being abused no matter how careful a driver you are.

Have a Spring-Prevacation Tune/Check Up done, where an alignment check and front end parts will be thoroughly checked and inspected. Plus many, many more items in the inspection.

This will help you have safe and breakdown free driving.

Also, there are bonuses that come with the check up

Warmly,

Lance Reinheimer
President

P.S. I would like to thank all of you who have referred people. It is greatly appreciated! We need everyone's help!

Employee Profile

Ilhoe (Brian) Kim
Technician

Started at Lanpro: October 2017

Experience prior to Lanpro: 11 months

Education: Graduated High School, Mennonite Brethren Collegiate Institute 2007

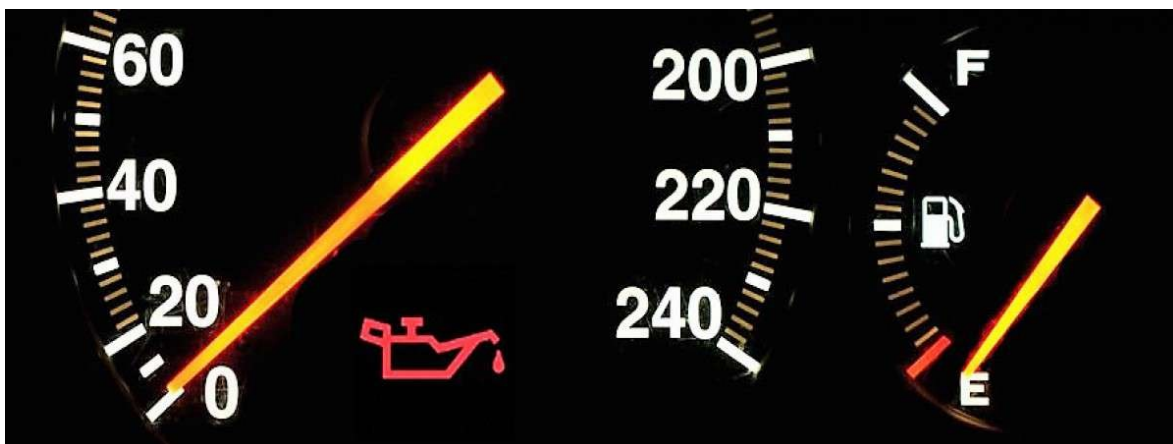

University of Manitoba 2007-2009

Red River Community College, Automotive Technician Certificate 2017

Interests/Hobbies: Playing basketball and video games, reading and watching movies.

“Ultimate Service So You Can Have Safe and Breakdown Free Driving”

Why Does the Oil Light Come On?

It's best to have a repair shop do this because they can test the system from a few different angles to verify the results.

Other Causes of Low Oil Pressure

Your dashboard's instrument cluster has a light on it that either reads "oil" or looks like an old fashioned oil can. What should you do if you see this light while you're driving?

Don't ignore the oil light because it is an indication of a potentially serious problem.

Why does the oil light come on?

The oil light comes on when your engine suffers a drop in oil pressure. Without oil pressure, the engine can't lubricate itself, and the result is self-destruction, meaning you have to do some seriously expensive internal engine repairs.

You may be tempted to try to make it home or make it work, but an engine with no oil pressure is an immediate concern. It's almost guaranteed that you'll be rebuilding the engine if you don't address the low oil pressure as soon as possible.

Why Oil Pressure is Necessary

When your engine has enough oil in it, the oil pump is constantly pumping oil into all of the tubes that carry the oil to the parts of the engine that need lubrication. The action of the oil pump as it pushes the oil through the system builds up a certain amount of pressure.

This pressure makes all of the oil sprayers work internally. If there is not enough oil to keep up with the demand of the oil pump, you get periods of time, seconds even, when there isn't any pressure in the system. This may sound minor, but even a minute with no oil pressure can be enough to ruin an engine from the inside out.

How to Check Oil Pressure

Before you make any major engine repairs, be sure to check the oil pressure sender to be sure your oil pressure is actually low.

Another cause of low oil pressure can be a failing oil pump or a blockage in the system. An engine can become so gummed up that an oil passage is blocked to the point of reducing oil pressure.

Yearly oil system flushes will help prevent this condition.

The good news is replacing an oil pump isn't the worst repair in the world. And if you've seen the oil light come on while driving, you should count yourself lucky that it was just the pump.

If the oil light comes on when you're on the road, you should pull over as soon as it's safe and turn the engine off. While you're on the side of the road, you should check the oil. If it's low, go ahead and add some engine oil and see if it goes off. If not, it's time to take it to the shop. Better to spend a few bucks on an oil change now than to have to deal with a seized engine that can cost thousands of dollars later.

Thank You for Your Referrals

Along with the Gift Certificates they have received, all are entered to win an iPad (1 in 10 chance to win)

Add Your Vehicle to Spring Forward Safety Checklist

Add Your Vehicle to Your Spring Forward Safety Checklist

Spring is here and its arrival means warmer weather, more hours of daylight and spring break travel. As you set your clocks forward on March 11, and plan to check your smoke and carbon monoxide detectors, take a few steps to make sure your vehicle is safe and road-trip ready, says the non-profit Car Care Council.

- Check that all interior and exterior lighting is working properly and replace worn wiper blades so you can see clearly when driving at night and during spring showers.
- Check the tires, including tire pressure and tread. Underinflated tires reduce a vehicle's fuel economy and uneven wear indicates a need for

wheel alignment. Tires should also be checked for bulges and bald spots.

- Check filters and fluids, including engine oil, power steering and brake and transmission, as well as windshield washer solvent and antifreeze/coolant. Dirty air filters can waste gas and cause the engine to lose power.
- Check the hoses and belts and replace if they become loose, cracked, brittle, frayed or show signs of excessive wear, as they are critical to the proper functioning of the electrical, air conditioning, power steering and cooling system.
- Check the brake system and

make sure the battery connection is clean, tight and corrosion-free.

- Check if there is a defect in your vehicle on the National Highway Traffic Safety Administration (NHTSA) website at nhtsa.gov/recalls by using the VIN look-up tool. Watch a step-by-step video on how to locate your VIN and find out more about how recalls work.

"Checking your vehicle thoroughly and taking steps to have auto repairs performed before the spring and summer driving season will not only give you peace of mind, but will also help avoid the inconvenience and potential safety hazards of breaking down when you're miles from home," said Rich White, executive director, Car Care Council.

Car Trouble

SHOP TALK - ON THE LIGHTER SIDE

1. Why did the Physics teacher break up with the biology teacher?
There was no Chemistry!
2. Why do the French like to eat snails so much? They can't stand fast food!
3. Optimist: The glass is half full
Pessimist: The glass is half empty.
Mother: Why didn't you use a coaster?
4. When I look at chocolate, I hear two voices in my head. The first one says: "you need to eat that chocolate." The other voice goes: "You heard. Eat the chocolate."
5. My wife is a bit weird.
She always starts her talking with "Michael, are you listening to me?"
6. My SMS autocorrect just changed "I'm so concerned with existential anxieties it is difficult to breathe" to "I feel great."
7. Why couldn't Mrs. Dracula sleep properly? Because of Draculas' coffin!
8. My friend boasted he had a body of a Greek God.
I had to explain where Buddha actually comes from!
9. A guy calls the fire department and yells excitedly: "You have to come, now, there's a fire!" "OK sir, but please tell us how do we get to you?" The man asks, puzzled: "What, you don't have them big red trucks anymore?"
10. Financially I'm set for life.
Provided I die next Wednesday!
11. What did the toilet roll complain about? "People just keep ripping me off!"
12. "What's the name of your new dog?" "I don't know, he wont tell."
